It was interesting that Moore's law still applies to this day and only now some doubt are made about it

Now that we've reached the limit of transistor in a processor, number of processors would have to increase i.e. parallel processing

It was also fascinating that Graphic processor were developed as a processor with special purpose.

The fact that ARM was recently bought for 23 billion pounds by a Japanese company SoftBank Group was also interesting.

It was intriguing that in the 1940's Dials and punch cards were used as a kind of GUI

Another thing that made me thankful that I live in this era of time was that ENIAC I took a year to design and 18 months to build and cost half a million dollars. .
